Getting to know ChatGPT: A Simple Look at a Complex AI

Have you ever wished for a tool that could write for you, understand you, and even chat like a human? Enter ChatGPT, a fascinating creation from OpenAI. In simpler terms, ChatGPT is a highly advanced computer program designed to understand and produce human-like text.

ChatGPT is like a very smart parrot, capable of producing engaging and meaningful sentences. It does this by guessing in the word in a sequence, much like completing a sentence in a game of fill-in-the-blanks. It's built using a special form of artificial intelligence known as a Transformer model, making it a whiz at handling tasks involving language.

Although ChatGPT was initially trained on a vast amount of text from the internet, it doesn't remember specific documents or sources. It's more like it studied the entire library but doesn't recall any particular book. This means your data and conversations with it are private and secure.

What's more, ChatGPT isn't just a listener; it's an active participant in a conversation. It understands the context, like who's speaking and the topic at hand, and responds appropriately. This makes it useful for a wide range of tasks, from answering customer queries to assisting with learning and even helping with creative writing.

However, it's important to remember that ChatGPT is still a computer program at its core. It doesn't have feelings or opinions and doesn't understand things the way humans do. It's a tool, designed to help us, not replace us.

The real magic of ChatGPT lies in its fine-tuning process. After its initial learning phase, it gets extra training with the help of human reviewers. They guide it to respond more like a human and to better respect our values. It's a bit like training a pet: with feedback and patience, it learns to behave better over time.

In short, ChatGPT is an exciting step forward in the world of artificial intelligence. As we at RWK IT Services witness these advancements, we are thrilled about the possibilities they bring to our daily lives. ChatGPT represents a peek into the future, where human and computer interactions might be more seamless than ever before.

**Now that you've learned a bit about ChatGPT, we can fill you in on a secret...
This article was written entirely by ChatGPT!**

Coming Soon! In June we will show you how ChatGPT can assist with Excel functions & formulas!

Employee Spotlight

Daniel

Technical Support Specialist

What is your favorite hobby? *I love camping and hiking. I love exploring new places and taking long road trips with friends.*

What was your first job? *My first job was in construction when I was 16 years old.*

What is something that is on your bucket list? *One of my biggest dreams is to hike a volcano. I almost did it two years ago in Guatemala but the volcano was active.*

Summer is coming. What are you looking forward to? *Hanging out with friends and playing volleyball with new people.*

You win the lottery, what is the first thing you do or buy? *Nothing, lol. I would enjoy the peace of mind and knowing that I am not dependent on money to enjoy life.*

What is your favorite thing about working at RWK? *I love to learn, so working on projects has really pushed me to learn new technologies and strategies.*
